

# MapRunF app Initial setup

Introducing a new feature we can use for Orienteering, a smart phone app to record touchless timing.

Go to Play Store, Search for MapRunF and install

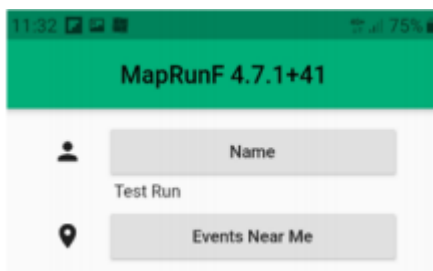

Make sure mobile data & location are turned on

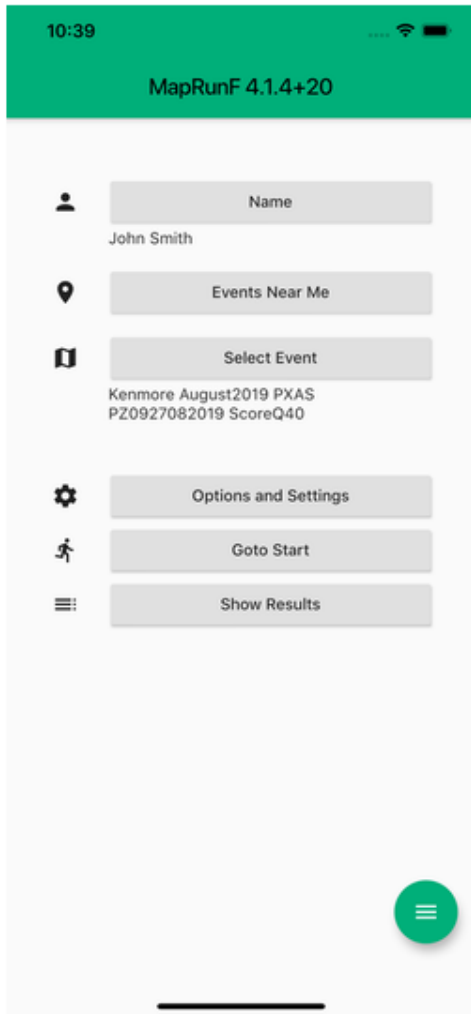

Also make sure that MapRun is allowed to run in the background. If your phone goes to sleep it can't record.

This is generally set in "Settings > Apps > ... MapRun", but is different on different models and versions of Android/iOS.

Enter your name and other data

You should now be presented with the apps home page

All done.
